## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 11-15 allowed.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-10 and 16-20 rejected under 35 U.S.C. 103(a) as being unpatentable over Bartic et al. (6,521,109) in view of Kuroda et al. (2003/0132392).

Regarding Claims 1-10 and 16-20, Fig. 4 of Bartic et al. disclose a Ph sensing/measuring FET type sensing device manufacturing steps where detail 51 is wafer, 54 and 55 are gold source/drain contacts, and layers 52 and 53 are dielectrics. Furthermore, dielectric layers are used as sensing layers and are located below source/drain contacts 54 and 55. Dielectric layers 54 and 55 are exposed to outside through cavity 57. Bartic et al. fail to disclose the perforation/hole/opening structure. However, Kuroda et al. disclose a chemical sensor where in Figs. 1, 2b and 7 and paragraph 10, the required perforations/openings/holes are disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required perforations/openings/holes in Bartic et

al. as taught by Kuroda et al. in order to have a higher accuracy semiconductor device to be used in sensor applications.
